Don't Let Cheap Parts Cost Time and Create Comebacks

Non-OE manufactures make and offer copycat goods at low, 'too good to be true' prices. This is at the expense of quality as these manufactures do not bear the cost associated with R&D expertise and robust testing/quality control.

Problem

Non-OE Knock-Off

Copy of original Lemförder designs are produced and sold to the market with significant defects. The riveted ball-joint is completely off-center and misaligned.

Solution

Genuine Lemförder

Specify Genuine Lemförder steering and suspension parts and leave the guesswork behind.

Effect

Non-OE Knock-Off

If the installer catches this issue before installation, the shop would waste time returning and buying new parts.

If installed, this part would cause immediate alignment and drivability issues that could cause a 'comeback'.

Advantage

Genuine Lemförder

- No wasted time fixing issues caused by poor quality parts
- Assured fit, form and function
- Highest quality materials that are tested to OE specifications
- Low-friction technology provides reliable performance without the cost and environmental waste of constant re-lubrication
