SACHS Shocks & Struts

The Choice is Simple

Durability

SACHS piston rods are hardened, chromed and micro-polished to increase durability. This durable combination helps prevent rust and piston seal wear to promote the longest service life in any environment.

Technology

SACHS struts and shock absorbers are intelligently engineered to restore original dynamics while designed to meet the highest safety, comfort, performance and quality standards.

Innovation

Low Friction seal is the most advanced seal in the industry. SACHS seals are highly wear resistant keeping oil in and contaminants out.

Endurance

Engineered to restore original handling dynamics, SACHS products maintain a tight tolerance which leads to a longer service life.

Manufacturing Expertise

The division for SACHS located in Mexico has the largest and most modern plant in the Americas for the manufacturing of shock absorbers and struts with a capacity of over 12 million shocks annually. ZF SACHS supplies to both original equipment and the aftermarket.
