

## AIR COMPRESSOR

Whatever your challenge, you can rely on us to be the solution. Rest assured, WABCO has the specialized components and complete systems to keep you moving. From improved all-around safety to increased efficiency, smarter operations, and telematics that ensure a whole lot less downtime, WABCO aftermarket parts set the standard.

The compressor is the heart of the Electronically Controlled Air Suspension (ECAS) supporting advanced driving capabilities, enhancing driving comfort and vehicle safety.

As a rule, original equipment suppliers offer the complete Air Supply Unit as a replacement in the event of a repair. WABCO has developed a repair solution to meet the needs of our independent aftermarket customers, offering a plug-and-play solution with a single compressor to repair the Air Supply Unit in the most cost-efficient way.

Our new variants are technically equal to existing compressors of Original Equipment Suppliers (OES).

### **ALMOST 40 YEARS EXPERIENCE IN DESIGN AND PRODUCTION OF AIR SUPPLY MODULES**

- Proven technology with millions of units installed
- Used by virtually all major OEMs on a global scale
- Cover a wide range of vehicle platforms
- Genuine product with highest reliability through quality
