

Ford Fiesta

Item No. 480 000 / 480 001 / 480 002

Fig. 1: front axle shock absorber, left

Fig. 2: front axle shock absorber, right

Fig. 3: rear axle shock absorber

The shock absorbers are produced with a new manufacturing process which offers the following advantages:

- New connection technology: punch riveting and crimps instead of welding.
- No paint to protect from corrosion required.
- Less impact on the environment due to less CO2 emission during production.

The new design of the shock absorbers and the responsiveness of the new valve system require them to always be assembled **in pairs**.
