

Fig. 1: ConAct with inner seal

Fig. 2: ConAct with outer seal (roll bellows)

1 Roll bellows

Sealing measures on the ConAct prevent clutch abrasion debris and dirt from entering the piston area.

The following sealing measures are used, depending on the vehicle manufacturer, the vehicle's year of construction and the evolutionary phase of the ConAct:

- with internal seal which is not visible from the outside (Fig.1)
- with outer seal (roll bellows) (Fig.2)

Both variants are interchangeable.

ZF Services ConAct clutch release bearings always correspond to the latest OE volume production status.
