

Tech Wise

BEND, DON'T BREAK!
Choose Lemförder and
Maintain Control and
Safety.

The task of the control arm is to maintain control at all times, even in an accident. In the event that a control arm breaks, the ability to make potentially life-saving maneuvers is decreased if not completely lost.

Problem

Non-OE Knock-Off

Some manufacturers market "heavy/severe duty" products that fail Lemförder's stress tests for safety.

Solution

Genuine Lemförder

Specify Lemförder, a brand that tests every control arm for maximized safety and durability.

Effect

Non-OE Knock-Off

In the event that these control arms are subjected to the same forces in an accident or other event, vehicle control and safety will be significantly compromised.

Advantage

Genuine Lemförder

Your customer's vehicle is repaired with suspension parts designed, manufactured and tested to the highest standards for the utmost durability, control and safety.
